EXPORTS...

. . . their importance to the United States economy

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter— currently selling $200 billion of U.S. goods abroad— and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per $1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about $6 billion of their products annually, an additional $21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for $1 of every $4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living— and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to $57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

Virginia Export Highlights

Virginia's exports of manufactured goods totaled $3.3 billion in 1981, 113 percent above the level in 1977. They rose more than twice as fast as production.

An estimated 27,400 jobs in Virginia were directly related to producing manufactured exports in 1981. About 18,600 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus, 46,000 jobs in Virginia were dependent on exports of manufactured goods—about one of every nine manufacturing jobs in the state.

Exports of bituminous coal, valued at $494 million in 1981, were one and a third times the 1977 value.

Manufactured exports doubled

Virginia's exports of manufactures totaled $3.3 billion in 1981, an increase of 113 percent since 1977. The state ranked 16th nationally in sales of these products to foreign countries. Its exports accounted for 2 percent of the U.S. total. Manufacturing shipments from Virginia firms rose by 50 percent, less than half the rate of expansion in exports.

Chemicals and tobacco products were Virginia's major exports. Substantial amounts of electric equipment, manufactured food, and nonelectric machinery also were shipped abroad. Virginia ranked second nationally as an exporter of tobacco manufactures, fourth in textile mill products, fifth in furniture/fixtures, and sixth in chemicals.

Chemicals topped Virginia's list of export manufactures. Exports more than doubled their 1977 value to reach $982 million in 1981. Foreign sales in 1981 were 21.6 percent of output compared with 14.9 percent 4 years earlier. Export growth in this period accounted for about one-third of this industry's increased production. These foreign sales generated 7,000 export jobs.

Tobacco manufactures exports valued at $846 million accounted for 25 percent of the state's production. Exports were 46 percent of the production growth from 1977 to 1981. Virginia accounted for 39 percent of the nation's manufactured tobacco exports in 1981. The 4,000 export jobs were one-fifth of the industry's total employment in the state.

The Census Bureau has estimated that the full impact of U.S. exports on Virginia's manufacturing activity was 14.3 percent rather than the 9.3 percent attributable to direct exports as shown in table 3. Estimates including supporting shipments of materials and parts for incorporation in products exported from 50 states are shown in tables 6 to 8. Thus, of the expanded manufacturing output generated between 1977 and 1981, 23 percent—or $1 out of every $4—was due to export-related shipments.

Tobacco leading export crop

Virginia's share of U.S. agricultural exports in FY 1982, including some manufactures of farm origin, totaled an estimated $384 million, up 71 percent from the FY 1977 level. Unmanufactured tobacco valued at $132 million continued to be the leading crop sold abroad as it had been all through the 1960's and early 1970's. Foreign sales in 1982 were 48 percent above those in FY 1977. Other commodities of substantial value were soybeans, wheat and flour, and feed grains.

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 26 percent of the rise in farm sales and added substantially to the income of Virginia farmers. In this period, the export contribution to each dollar of the state's farm sales increased from 22 to 24 cents.

Exporter of fish

Virginia's fishing industry exported $13.8 million worth of fishery products in 1981. Over half of this total consisted of fish in fresh and frozen form. The

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled $28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Virginia *					
1976	1,545	35.6	9.5	58.3	2.8
1977	1,573	33.5	8.5	56.1	2.6
1980	3,208	48.5	11.6	89.9	3.7
1981	3,344	46.0	11.1	88.3	3.6
United States					
1976	83,098	2,125.4	11.3	3,452.1	4.0
1977	85,796	1,990.2	10.2	3,258.2	3.6
1980	151,216	2,639.3	12.8	4,808.3	4.8
1981	164,283	2,603.8	12.8	4,794.0	4.7

* Virginia's export-related manufactures were as follows in million dollars: 1976, 2,370; 1977, 2,480; 1980, 4,876; and 1981, 5,163. About 23 percent of the increase in Virginia's manufacturing production from 1977 to 1981 was generated by growth in export-related manufactures.

TABLE 1

Virginia Manufactured Exports, Production, and Employment, 1981

- Virginia's leading manufactured exports were chemicals, tobacco products, and electric equipment.
- These three industries accounted for 63 percent of Virginia's total exports of manufactures.

Industry group	Production (million dollars)	Estimated exports (million dollars)	Exports as percent of production	Estimated employment related to exports (thousands)	Employment related to exports as percent of total employment

* Exports reflect shares in national exports according to each state's production. [1] Commercial sales plus net Commodity Credit Corporation loans and purchases under price support programs. [2] Includes exports that were not apportioned among states. [3] Less than $500,000. [4] Not available. [5] Less than $100,000. -- Not applicable.

TABLE 6

Virginia Manufactured Production, Export-Related Manufactures and Employment, 1981

- About 1 out of 9 Virginia jobs in manufacturing are due to exports.
- Four industries—chemicals, textile products, tobacco manufactures, and electric equipment—accounted for 56 percent of Virginia's export-related jobs in manufacturing.

Industry group	Production (million dollars)	Export-related manufactures (million dollars)	Export related as percent of production	Employment for export-related manufactures (thousands)	Employment for export related as percent of total employment
Total[1]	35,910	5,163	14.3	46.0	**11.1**

Petroleum and coal products	(1)	(1)	--	(1)	**--**

[1] Total includes estimated production and export-related values and employment numbers which are withheld for certain industry groups to avoid disclosure of individual companies' data. [2] Less than 50 employees. [3] Less than one half of one percent. -- Not applicable.

TABLE 7

Virginia Growth in Export-Related Manufactures

- The 108 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- Half the increase in tobacco manufacture production and almost half the rise in chemicals output was generated by growth in export-related manufactures.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Production

Note: Totals include values for industry groups which are not shown separately.

TABLE 8

United States Export-Related Manufactures and Employment by State

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

State	Rank as export related in 1981	Export-related manufactures 1977 (million dollars)	Export-related manufactures 1981 (million dollars)	Percent increase from 1977 to 1981	Percent of state production 1981	Employment for export related as percent of manufacturing employment	Total employment related to manufactured exports (thousands)	Total employment related to manufactured exports Percent of civilian employment
U.S., total	--	**142,404**	**271,703**	**91**	**13.4**	**12.8**	**4,794.0**	**4.7**

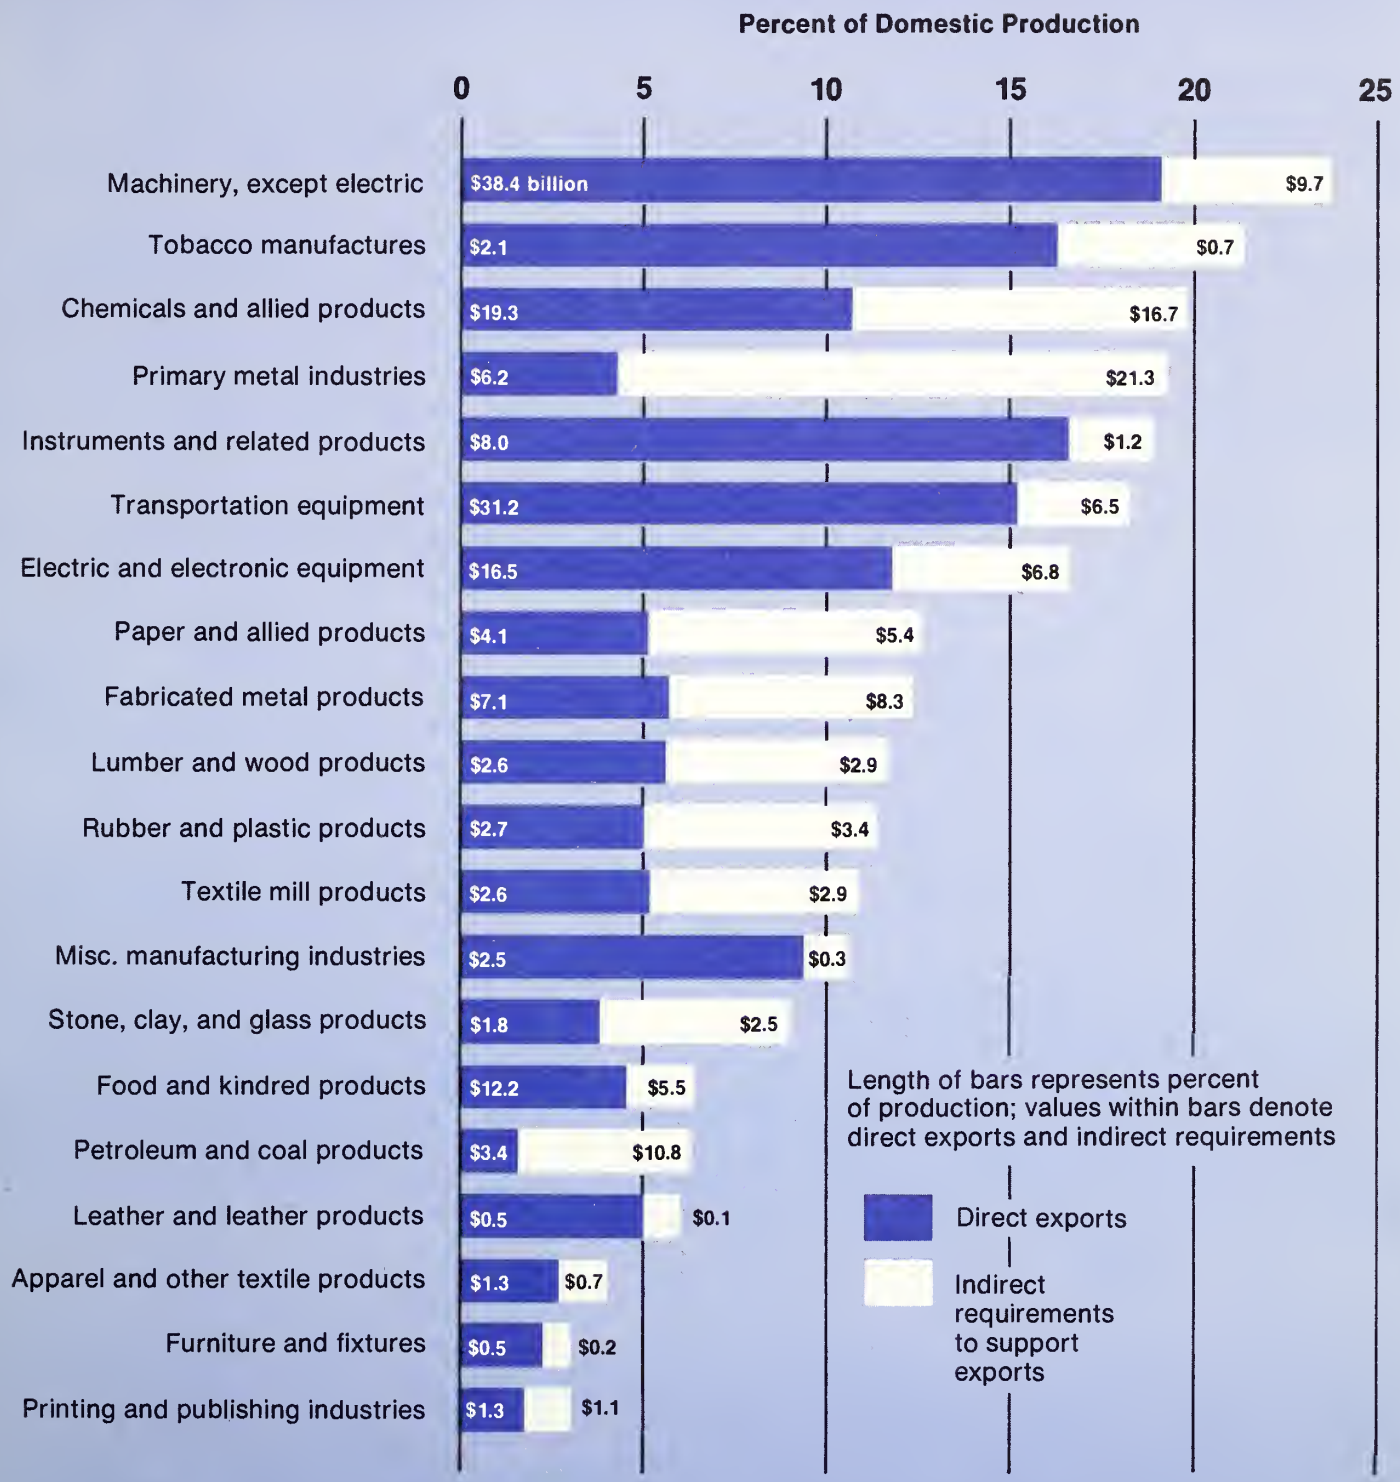
☆ U.S. GOVERNMENT PRINTING OFFICE: 1984 - 421-009 - 227/748

Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports



Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1
remainder was divided between fish oils and fish meal. Virginia ranked second in U.S. exports of the latter. Shipments abroad were valued at $2.5 million, which was 13 percent of U.S. exports of the product in 1981.

Fourth largest coal exporter

Virginia ranked fourth to West Virginia, Pennsylvania, and Kentucky as a U.S. exporter of bituminous coal in 1981. Foreign sales totaled $494 million or one-eighth of the nation's coal exports.

Export-related employment grew

Virginia's $3.3 billion worth of manufactured exports provided direct employment for an estimated 27,400 workers in 1981. Those jobs constituted 6.7 percent of the total direct employment in manufacturing in the state. From 1977 to 1981 the number of workers engaged in the production of manufactures was up only 4 percent while employment directly related to exports jumped by 41 percent. Two-fifths of these workers were concentrated in the chemicals, tobacco manufactures, and textile mill products industries. These jobs accounted for between 9 and 22 percent of the work force in those industries.

In addition, an estimated 18,600 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 46,000 jobs in Virginia were directly or indirectly dependent on exports of manufactured goods. This number was 11.1 percent of all manufacturing employment in the state.

Over one-half of the jobs dependent on manufactured exports were concentrated in the chemicals, textile mill products, tobacco manufactures, and electric equipment industries. These jobs accounted for one out of three jobs in the chemicals industry, one out of four jobs in the tobacco manufactures industry, and one out of seven jobs in the electric equipment and textile products industries.

An additional 42,300 jobs were generated in non-manufacturing industries that supply materials and services supporting manufactured exports. Viriginia's total employment related to manufactured exports amounted to 88,300 jobs.

It is estimated that Virginia's farm employment related to exports in 1982 amounted to 23,700 or about one out of every four farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information /Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures,* M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for $2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
